## Testimonial

### AKOS Test Net

AKOS decided to implement an internet measurement tool. For this purpose, AKOS placed an official tender which was won by Specure GmbH in 2015. The project team at this time was Andreas Gaber as project manager, Leonhard Wimmer, Lukasz Budryk and Benjamin Pucher.

The AKOS Test Net is a specific implementation. The project team was very concerned about our requirements and made a good job of realizing them in every phase of the project. What really helped us was the integration of the measurement of concrete, white-spotted coverage obligations. After using our solution now for more than a year, we can say that our measurement results are better as we have expected. In addition, the "Loop Mode" worked perfectly to test and measure coverage obligation for our national ISPs.

Andreas Gaber showed great social skills at managing external partners during our project.

We are happy to recommend them and wish them all the best for the future.

Matija Brodnik, AKOS

(Head of QoS and RF Monitoring dpt.)
