

# alladin Nettetst

## Europe's official Reference Monitoring System

Digitization is a key priority today.  
ICT strategy needs promotion, coordination and control.  
Nettetst provides the truth about the national broadband status.

We empower governments to make informed decisions, better investments and to achieve faster progress.

Nettetst benefits: monitor everything, all the time and everywhere

- Monitor progress in national digitization strategy
- Benchmark quality of national broadband coverage
- Compile coverage maps and define areas for development
- Evaluate outcome of public funding and measures
- Prioritize ICT investments

End-to-end monitoring of user experience with the modular Nettetst

- Tests performance, availability and quality of broadband connections and services
- For all prevailing technologies: fixed line, WiFi & mobile
- Runs on smartphones, PCs, hardware and smart devices
- Nettetst in your corporate design or integrated in existing governmental apps, websites or hardware
- Available on dedicated hardware boxes (ANT boxes)

Nettetst is compliant to ETSI/ITU-T standards, BEREC recommendations (EU) and DSM Regulation (EU).  
alladin is official supplier of BEREC's (Body of European Regulators) NN Reference System for Europe.  
Trusted by Regulators.
